DECENTRALIZATION

Decentralization refers to the distribution or delegation of power, authority, and functions from a central entity to smaller, more localized entities. This concept can be applied across various fields, including governance, technology, and organizational management. Here are some key aspects of decentralization in different contexts:

- **Administrative Decentralization:** Focuses on redistributing authority, responsibility, and financial resources for providing public services among different levels of government.

- **Fiscal Decentralization:** Concerns the financial aspect, allowing local governments to raise their own revenue and decide on expenditures independently.

- **Decentralized Applications (DApps):** These applications run on decentralized networks, leveraging blockchain technology to ensure that they operate without a central point of control.

- **Decentralized Management:** In businesses, decentralization refers to distributing decision-making authority down the hierarchy to empower managers and employees at various levels.

BLOCKCHAIN TECHNOLOGY

Blockchain is a shared, immutable ledger that facilitates the process of recording transactions and tracking assets in a business network. An asset can be tangible (a house, car, cash, land) or intangible (intellectual property, patents, copyrights, branding). Virtually anything of value can be tracked and traded on a blockchain network, reducing risk and cutting costs for all involved.

Business runs on information. The faster it's received and the more accurate it is, the better. Blockchain is ideal for delivering that information because it provides immediate, shared and completely transparent information stored on an immutable ledger that can be accessed only by permissioned network members.

A blockchain network can track orders, payments, accounts, production and much more. And because members share a single view of the truth, you can see all details of a transaction end to end, giving you greater confidence, as well as new efficiencies and opportunities.

X3 PLAN

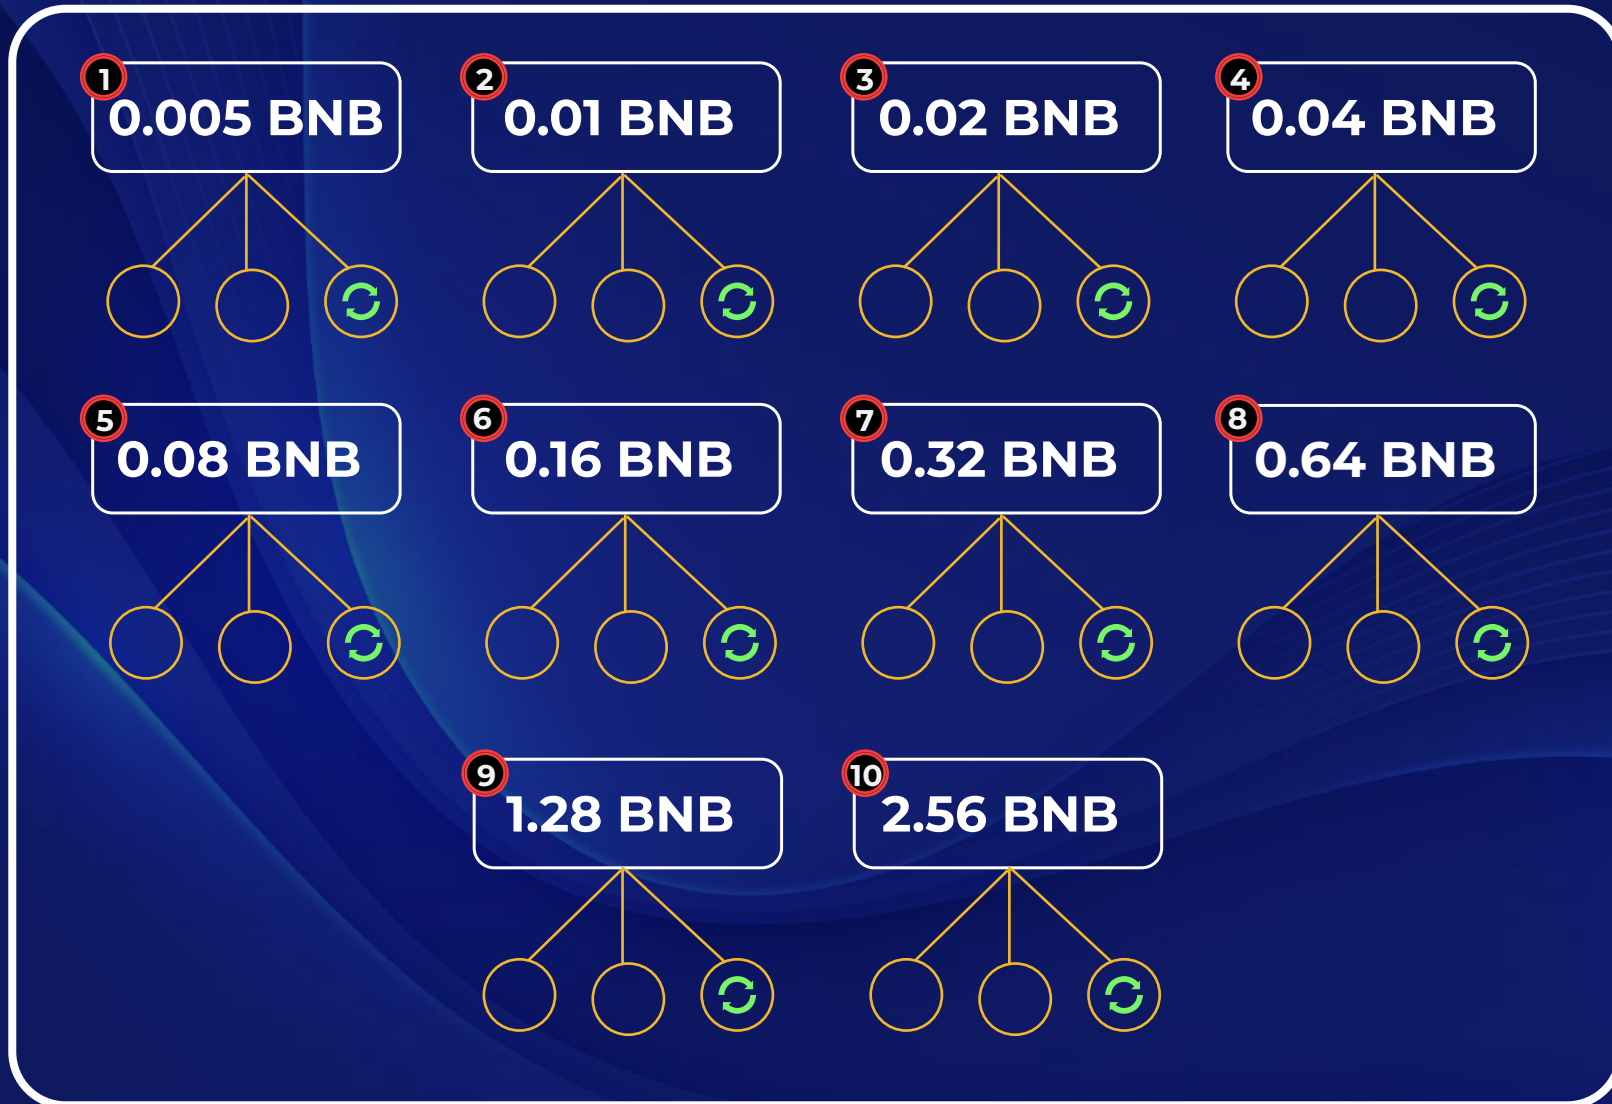

On the 1st line, you get 200% from two places. And the 3rd place is used for recycle in same slot.

Thus, the total yield is 200% from one circle of the matrix and every time 200% from another circle of recycle.

X3 Slot

X4 PLAN

Two LINES
3 PLACES

In the **X4** matrix you have **6 places** on **2 lines**. 2 - in the 1st line, 4 places - in the 2nd line .

Partners in your matrix may:

- invited by you
- comes by spillovers from above, up to 1 uplines!
- comes by spillovers from down!
